**From the above given tables create Stored Procedures:**

### Part – A

1. Department, Designation & Person Table's INSERT, UPDATE & DELETE Procedures.
2. Department, Designation & Person Table's SELECTBYPRIMARYKEY
3. Department, Designation & Person Table's (If foreign key is available then do write join and take columns on select list)
4. Create a Procedure that shows details of the first 3 persons.

### Part – B

1. Create a Procedure that takes the department name as input and returns a table with all workers working in that department.
2. Create Procedure that takes department name & designation name as input and returns a table with worker's first name, salary, joining date & department name.
3. Create a Procedure that takes the first name as an input parameter and display all the details of the worker with their department & designation name.
4. Create Procedure which displays department wise maximum, minimum & total salaries.
5. Create Procedure which displays designation wise average & total salaries.
